

Hope Artificial Intelligence

Scenario Based Learning

A company works with number of employees, all the works are dependents on the employees. Even if one of the employees resign the job immediately then assigned work will be not finished at the time, so delivery of the project to the clients will be delayed. Company planned to make solution for this, they want to know which employee may resign next. If they know previously, they can arrange alternative to avoid such problem. As an AI Engineer you must give Solution to this.

- A) How will you achieve this in AI?
- B) Find out the 3 -Stage of Problem Identification
- C) Name the project
- D) Create the dummy Dataset.

A) How will you achieve this in AI?

The company wants to predict which employees are likely to resign in the future so that the management can take preventive measures.

Step to achieve this:

1. Collect current and past employee details
2. Predict attrition from the collected data
3. Take preventive measures like conducting employee engagement programs, Team outing, offer promotions or salary revisions and arrange backup resources for critical project.

B) Find out the 3 -Stage of Problem Identification

1. Stage-1 – NLP(Natural language processing)
2. Stage-2 – Supervised
3. Stage-3 – Classification

C) Name the project

- Employee Attrition Prediction System.

D) Create the dummy Dataset.

ID	Name	Age	Sex	Role	Exp	Salary	Promotion Last year	Atten- -dance%	Over time	Feedback	Attrition
101	XXX	26	M	Jr.Analyst	1	25000	NO	85	YES	Work load is more	Yes
102	YYY	32	F	Sr.Analyst	6	46000	YES	98	NO	Satisfied with the job	No
103	XYZ	40	M	Team lead	12	80000	YES	99	NO	Excellent	No
104	AAA	29	F	Jr.Analyst	3	32000	NO	82	YES	No Promotion	Yes
